DETAILED ACTION

Drawings

1. Figures 7 and 8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Andrew Adrian et al (5,812,095).

With respect to claim 1, Adrian teaches of an antenna apparatus mounted on a vehicle body disposed in the spoiler comprised of an insulating resin (i.e. spoiler, luggage or cargo racks, and washer in US patent of Adrian) such that the vehicle body serves as ground (see column 3, lines 61-66 of the specification). Claim 1 is read to

Application/Control Number: 10/718,558

Art Unit: 2821

mean that part of the spoiler is made of resin. Adrian clearly teaches of an insulating plastic washer as part of the spoiler (see column 6, section 23-26).

- 3. As for claim 2, Adrian further teaches of the spoiler being disposed in the rear end portion of a roof of the vehicle body (see figure 6).
- 4. As for claims 4 and 5, T-type, F-type and L-type feeder elements were interpreted as the feeder element having T, F and L shape, respectively. Claim 5 was further interpreted wherein the feeding element is comprised of either an F shaped or an L shaped element. Adrian teaches of an antenna apparatus that is T or L in shape as shown in figure 6.
- 5. Claim 3 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Andrew Adrian et al (5,812,095).

Mounting a spoiler at a height of at least 150mm from the trunk of a vehicle is believed to be the industry standard. As such, this limitation is an inherent feature in the antenna apparatus of Adrian

Alternatively, mounting the spoiler to be at a height of at least 150mm from the trunk of the vehicle remains obvious to one of ordinary skill in the art. Thus, it would have been obvious to one of ordinary skill in the art, at the time of the invention, to mount Adrian's spoiler above 150mm so as to increase the stability during high-speed traveling.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US patents to Thompson (6,433,749), Mizuno (4,760,402), Izawa (5,945,956) and Kudo (5977919) teach similar devices.
